Updated Oil Volume:

Updated Salt Water Volume:

Updated Other Volume:

Updated Other Contaminant

Notes:

Arrived on location at 15:20. 14 degrees F, cloudy, W/NW wind 10-20 mph. Observed the site and took photos. Walked heater/treater areas, CTB turnaround location, tank battery location and CRP land adjacent to the property. Did not notice any petroleum impacts to areas around the CTB; however, there was an approximate 30' by 15' area of soil and vegetation below and west of the flare stack that appeared impacted by petroleum product. Not sure if this is the area reported or another release not yet reported. Further followup needed.
